

“Our Patients say that XTRAC® is the best thing that ever happened to them!”

According to the National Psoriasis Foundation approximately 4.5 million adults in the United States are faced with the lifelong disease of psoriasis.

Many are faced with the most common form—plaque psoriasis where skin takes on a raised, red and scaly appearance due to a build-up of dead skin cells.

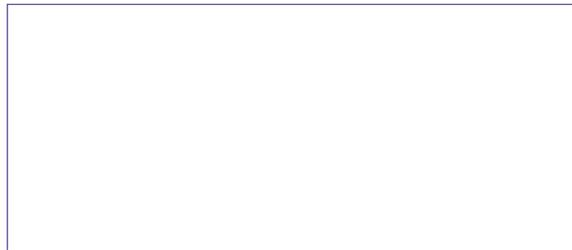

If you, a family member or friend suffer from psoriasis, talk to a doctor today to find out if the XTRAC® Excimer Laser is right for you!

“I just can't say what a good feeling it is not to see those ugly scales when I raise my arms or look in the mirror. After six treatments, they were gone. It is just amazing. XTRAC® is the best thing that ever happened to me. Every time I pass a mirror, I have to look, because I just can't believe it's gone.”

– N. R., Bethlehem, PA

“I could not wear short-sleeved shirts for fear that someone would notice. I was totally embarrassed by my red, flaky, scary looking skin. Now, my elbows are COMPLETELY clear! Even the discoloration that occurred during the treatments has almost disappeared! I can't believe what a difference XTRAC® has made!”

– M. M., Des Moines, IA

So Long Psoriasis...

A win for skin with

XTRAC
ULTRA

Efficient. Effective. Targeted.

A Win For Skin.

Do you feel like you have been searching for years for the perfect solution to your psoriasis? And you've tried every cream, lotion and potion that has been put in front of you? Look no further because the **XTRAC**[®] Excimer Laser for psoriasis is your answer to winning the fight!

The **XTRAC**[®] Laser is the first FDA cleared excimer laser system for the treatment of psoriasis. The laser directly targets the psoriasis lesion with a narrow, focused laser beam to safely

deliver super-narrowband UVB phototherapy to pinpoint specific regions needing treatment. Numerous clinical studies have demonstrated that most mild to moderate plaque psoriasis patients will achieve 75% or greater clearance in as few as 6-10 brief treatment sessions.¹

The **XTRAC**[®] Excimer Laser has been shown to have fewer of the drawbacks often associated with other psoriasis treatments, such as premature aging of healthy skin, skin thinning or resistance to medication.

It's So Easy:

- Pain-free laser targets just the psoriasis lesions.
- Normal skin is not exposed to unnecessary UV light.
- Psoriasis remission possible in just 6-10 brief treatment sessions.¹
- Remission has been shown to typically last several months.²
- Covered by most major insurance companies.

Treatment of Psoriasis with the XTRAC[®] Excimer Laser.

Pre-Treatment

After 3rd Treatment

After 6th Treatment

3 Wks After Final Treatment

Treatments are fast, easy and performed in a physician's office. On the first visit, the physician may perform a dosage level test to determine optimal dosing on the patient's skin.

Then the physician or a trained health care professional will point the XTRAC[®] hand piece over the affected area and expose the lesion to the laser light. Treatments take only a few minutes and require no anesthesia.
